

FORWARD ALL INCOMING CALLS

Scope

The purpose of this document is to provide instructions on how to forward your Cisco incoming phone calls to an external phone number.

Procedure

- Press FWDAll or CFwdAll soft key beneath the Cisco IP Phone display.

- Wait for the phone to beep twice.
- Dial 9 + 10- digit External number to receive calls (if this does not work use 9 + 1 + area code and number). Note: This doesn't always work for some phone carriers.
- Wait for the Cisco phone to beep once. Your target number will then show at the top or bottom of the display.
